Coffee Barista App – UI Iteration Report

1. Initial UI Design

The initial screen of the Coffee Barista app was designed as a **menu browsing interface** where users can quickly view and navigate between different coffee options.

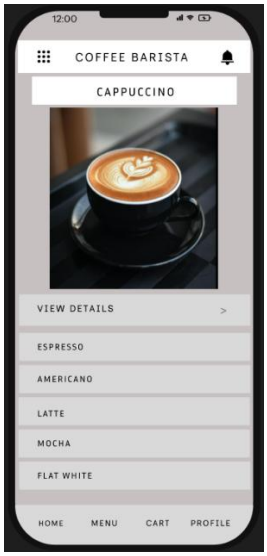
Key Elements

- Header with app title and icons (menu + notification)
- Highlighted product section (Cappuccino with image)
- “View Details” call-to-action
- List of coffee items (Espresso, Americano, Latte, etc.)
- Bottom navigation bar (Home, Menu, Cart, Profile)

Design Approach

The design focused on:

- Simplicity and structured layout
- Easy vertical scrolling
- Clear separation between sections



2. Feedback from Users

After testing this screen, several usability and design issues were identified:

Visual Experience

- The interface felt **too plain and generic**
- Lack of strong visual identity related to a coffee theme
- Color usage was **flat and not engaging**

Typography

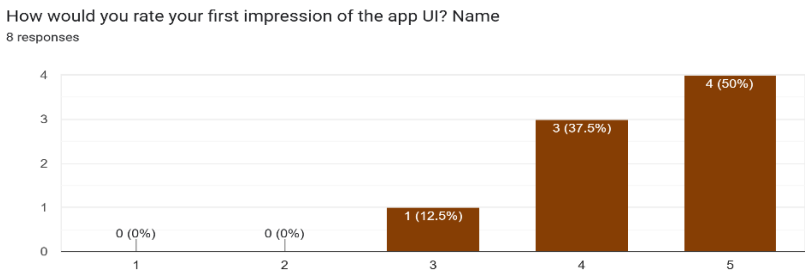
- Fonts appeared **default and less distinctive**
- Limited hierarchy between headings and content

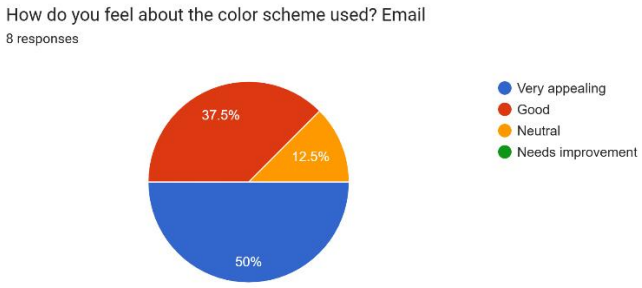
User Interaction

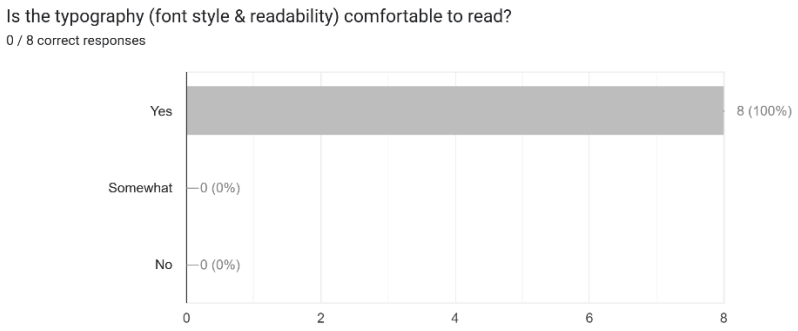
- “View Details” was not very compelling
- Users expected a more **direct action like ordering**

Engagement

- The screen felt **static**
- Product presentation did not create strong visual focus







---

3. Changes Implemented

Based on feedback, the screen was redesigned to improve engagement and usability.

Visual Improvements

- Introduced a **warm, coffee-inspired color palette**
- Enhanced product focus using a **centered circular image layout**
- Better use of spacing and visual balance

Typography Enhancements

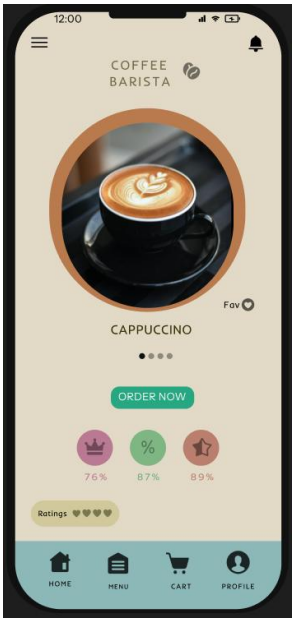
- Improved font styling for better readability
- Stronger hierarchy between title, content, and actions

Interaction Changes

- Replaced “View Details” with a more actionable **“Order Now” button**
- Added **interactive elements** like favorites (heart icon)

User Engagement Additions

- Included **ratings/percentage indicators** to provide quick insights
- Made the UI feel more dynamic and less list-heavy



---

4. Final Outcome

Before

- Simple but less engaging
- Weak visual identity
- Limited interaction clarity

After

- More visually appealing and thematic
- Clear primary action (ordering)
- Improved user engagement and focus

---

5. Conclusion

By refining a single screen using user feedback, the design shifted from a **basic menu layout** to a more **interactive and visually engaging experience**, improving both usability and overall appeal.
