EXPERIMENT-2

ROLL NO: 240701229
NAME: KARTHAVYA S

USER INTERFACE AND DESIGN

Chunking , Recognition & Recall

1. Home Screen

The home screen introduces the game with the title *Hustle Memory* and a visually appealing castle background. It includes:

- **Play** button to start the game
- **Organizer** option to view collected items
- A clean layout that immediately communicates the game's theme

The goal of this screen is to attract users and make the entry point simple and welcoming.

2. How to Play Screen

This screen explains the game rules in a step-by-step format. It clearly guides the user on:

- How the game works
- What actions to perform
- How scoring and progression happen

The instructions are written in simple language to ensure that even first-time users can understand the gameplay without confusion.

3. Organizer Screen

The Organizer acts as an inventory system where collected items are displayed. It is divided into sections such as:

- **Weapons**
- **Valuables**

This screen helps users track progress and adds a sense of achievement, encouraging replayability.

4. Let's Go / Game Play Screen

This is the main interaction screen where users play the memory game. Objects are displayed briefly and then hidden, requiring users to recall their positions.

Key design highlights:

- Clear object spacing to avoid clutter
- Consistent icon style
- Background visuals that enhance immersion without distracting gameplay

5. Recall Screen

In this stage, users are asked to recall previously shown items. This screen tests memory accuracy and attention.

The UI is designed to be minimal so the focus remains entirely on the task rather than decorative elements.

6. Review Screen

The review screen provides feedback on the user's selections. Correct and incorrect choices can be visually differentiated, helping users understand their mistakes and learn from them.

This reinforces learning rather than just scoring.

Odd One Out Screen

This screen introduces variation by asking users to identify the odd object among similar ones. It adds complexity and keeps the gameplay from feeling repetitive.

7. Results Screen

The results screen displays the final score (e.g., 4/5) along with options to:

- **Play Again**
- **Go Back to Home**

This screen provides closure to the game session while motivating users to improve their performance.
