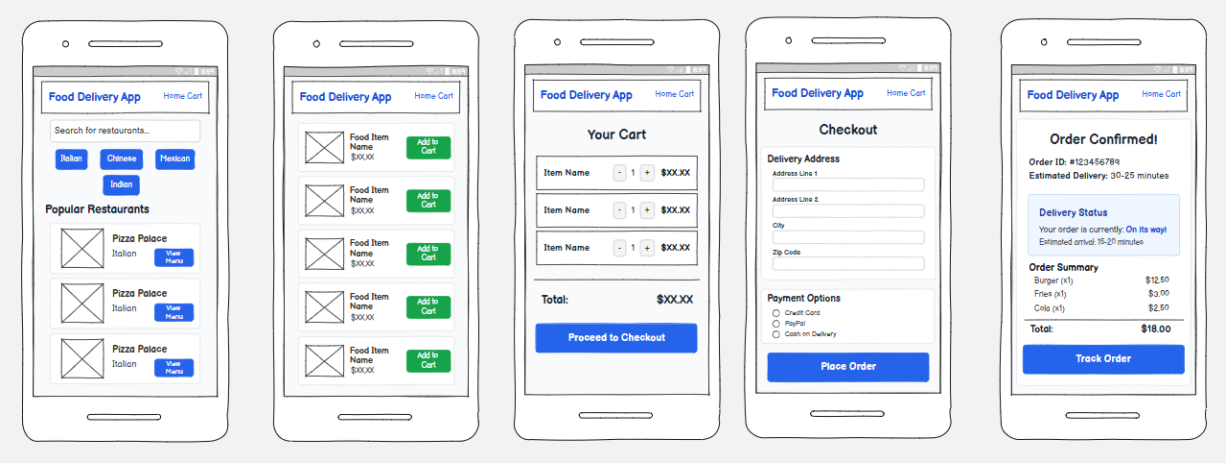
Food Delivery App – Wireframe Documentation



1. Introduction

This document ներկայացs the wireframe design of a **Food Delivery Mobile Application**, created using the Balsamiq tool. The purpose of this wireframe is to outline the **core user flow, layout structure, and key functionalities** before moving into high-fidelity UI design.

The wireframe focuses on simplicity, usability, and a smooth ordering experience.

---

2. Objective

- To design a clear and intuitive **food ordering flow**
- To define the **structure of key screens**
- To ensure easy navigation from browsing to order confirmation
- To visualize user interactions at a basic level (low-fidelity)

---

3. Wireframe Overview

The wireframe consists of **five primary screens**, representing the complete user journey:

1. Home Screen
2. Food Listing Screen
3. Cart Screen
4. Checkout Screen
5. Order Confirmation Screen

---

4. Screen-wise Description

4.1 Home Screen

Purpose: Entry point for users to explore restaurants and cuisines.

Key Elements:

- App header with title and navigation (Home, Cart)
- Search bar for finding restaurants
- Category filters (Italian, Chinese, Mexican, Indian)
- “Popular Restaurants” section
- Restaurant cards with:
    - Image placeholder
    - Name and cuisine type
    - “View Menu” button

Design Reasoning:

- Enables quick discovery using **search + categories**
- Highlights popular choices to guide users

4.2 Food Listing Screen

Purpose: Display available food items from a selected restaurant.

Key Elements:

- List of food items
- Each item includes:
    - Image placeholder
    - Food name
    - Price
    - “Add to Cart” button

Design Reasoning:

- Simple vertical list for easy scanning
- Direct “Add to Cart” improves speed of ordering

4.3 Cart Screen

Purpose: Allow users to review selected items before checkout.

Key Elements:

- List of added items
- Quantity controls (+ / –)
- Price per item
- Total cost calculation
- “Proceed to Checkout” button

Design Reasoning:

- Gives users control to modify order
- Clearly shows pricing before final step

4.4 Checkout Screen

Purpose: Collect delivery and payment details.

Key Elements:

- Delivery address form:
    - Address Line 1 & 2

    - City
    - Zip Code
- Payment options:
    - Credit Card
    - PayPal
    - Cash on Delivery
- “Place Order” button

Design Reasoning:

- Structured form for easy data entry
- Multiple payment options increase flexibility

4.5 Order Confirmation Screen

Purpose: Confirm successful order placement.

Key Elements:

- Order confirmation message
- Order ID
- Estimated delivery time
- Delivery status section
- Order summary with total cost
- “Track Order” button

Design Reasoning:

- Reassures user with clear confirmation
- Provides next step (tracking)

---

5. User Flow

1. User searches or selects a category on **Home Screen**
2. Views items on **Food Listing Screen**
3. Adds items to **Cart**

4. Reviews and proceeds to **Checkout**
5. Enters details and places order
6. Receives confirmation on **Order Confirmation Screen**

---

6. Design Principles Used

- **Clarity:** Simple layouts with minimal elements
- **Consistency:** Uniform structure across screens
- **Usability:** Easy navigation and clear actions
- **Efficiency:** Reduced steps to complete an order

---

7. Limitations of Wireframe

- No visual styling (colors, fonts, branding)
- Uses placeholders instead of real images
- Limited interaction (static representation)

---

8. Conclusion

The wireframe successfully outlines the **end-to-end flow of a food delivery application**, from browsing to order confirmation. It serves as a strong foundation for developing a **high-fidelity UI and functional prototype** in the next stage.
